Run the following query to verify all data is loaded:

```
SELECT 'Products' AS TableName, COUNT(*) AS Records FROM Products UNION ALL
SELECT 'Customers', COUNT(*) FROM Customers UNION ALL SELECT 'Sales',
COUNT(*) FROM Sales UNION ALL SELECT 'CustomerFeedback', COUNT(*) FROM
CustomerFeedback;
```

## Expected Results:

- Products: 30
- Customers: 500
- Sales: 2,500
- CustomerFeedback: 1,000

## Question 1.1:

```sql
select
  productID,
  productname,
  UnitPrice
from products
order by UnitPrice desc
```

See performance (1) Optimize

Table

| | productID | productname | UnitPrice |
|---|---|---|---|
| 1 | P004 | Smartphone Pro | 18999 |
| 2 | P003 | Laptop 15" i5 | 15999 |
| 3 | P001 | Smart TV 55" | 12999 |
| 4 | P007 | Digital Camera | 11499 |
| 5 | P006 | Gaming Console | 9999 |
| 6 | P005 | Tablet 10" | 7999 |
| 7 | P008 | Smart Watch | 5999 |
| 8 | P020 | Air Purifier | 5499 |
| 9 | P013 | Vacuum Cleaner | 4999 |
| 10 | P010 | E-Reader | 3499 |
| 11 | P019 | Food Processor | 3499 |

## Question 1.2:

Yesterday (2s) 1 SQL

```sql
SELECT region, COUNT (CustomerID) as Count
FROM customers Group by region order by count desc
```

See performance (1) Optimize

Table

| | region | Count |
|---|---|---|
| 1 | North | 154 |
| 2 | East | 122 |
| 3 | South | 118 |
| 4 | West | 106 |

4 rows | 2.16s runtime Refreshed yesterday

Witle Academy

## Question 1.3:

24 hours ago (9s) 1 SQL

```sql
SELECT OrderID, OrderDate, TotalSales
FROM sales
Order by OrderDate DESC
LIMIT 10
```

See performance (1) Optimize

Table

| | OrderID | OrderDate | TotalSales |
|---|---|---|---|
| 1 | ORD00770 | 2024-12-31 | 27198.3 |
| 2 | ORD02455 | 2024-12-31 | 1999 |
| 3 | ORD02423 | 2024-12-31 | 1497 |
| 4 | ORD00386 | 2024-12-31 | 13599.15 |
| 5 | ORD00750 | 2024-12-30 | 23745.25 |
| 6 | ORD01700 | 2024-12-30 | 299 |
| 7 | ORD02305 | 2024-12-30 | 10924.05 |
| 8 | ORD02308 | 2024-12-29 | 8499.15 |
| 9 | ORD01356 | 2024-12-29 | 539.1 |

## Question 2.2:

12:09 AM (2s) 1 SQL

```sql
SELECT C.CustomerID, CONCAT(C.FirstName, ' ', C.LastName) AS CustomerName, ROUND(SUM(S.TotalSales), 2) AS TotalSpent
FROM customers c
JOIN sales S
ON C.CustomerID = S.CustomerID
GROUP BY C.CustomerID, CustomerName
ORDER BY TotalSpent DESC
LIMIT 5
```

See performance (1) Optimize

Table

| | CustomerID | CustomerName | TotalSpent |
|---|---|---|---|
| 1 | C0026 | Charlotte White | 147986.4 |
| 2 | C0412 | David Taylor | 132136.95 |
| 3 | C0322 | Ella Lopez | 130492.05 |
| 4 | C0419 | Charlotte Walker | 130021.85 |
| 5 | C0251 | Tyler Moore | 126336.8 |

5 rows | 2.19s runtime Refreshed 23 hours ago

## Question 2.3:

Just now (2s) 1 SQL

```sql
SELECT EXTRACT(YEAR FROM OrderDate) AS Year,
EXTRACT(MONTH FROM OrderDate) AS Month,
ROUND(SUM(TotalSales), 2) AS TotalSales
FROM Sales
WHERE EXTRACT(YEAR FROM OrderDate) = 2024
GROUP BY
EXTRACT(YEAR FROM OrderDate),
EXTRACT(MONTH FROM OrderDate)
ORDER BY
Month ASC
```

See performance (1) Optimize

Table

| | Year | Month | TotalSales |
|---|---|---|---|
| 1 | 2024 | 1 | 833685.2 |
| 2 | 2024 | 2 | 647954.75 |
| 3 | 2024 | 3 | 778926.9 |
| 4 | 2024 | 4 | 639859.8 |
| 5 | 2024 | 5 | 727605.7 |
| 6 | 2024 | 6 | 589531.45 |
| 7 | 2024 | 7 | 969597.95 |

## Question 2.4:

05:26 PM (2s) 1 SQL

```sql
SELECT Channel,
COUNT(OrderID) AS NumberOfOrders,
ROUND(AVG(TotalSales), 2) AS AveragOrderValue,
ROUND(SUM(TotalSales), 2) AS TotalRevenue
FROM Sales
GROUP BY Channel
ORDER BY TotalRevenue DESC;
```

See performance (1) Optimize

Table

| | Channel | NumberOfOrders | AveragOrderValue | TotalRevenue |
|---|---|---|---|---|
| 1 | Online | 1598 | 6911.54 | 11044639.4 |
| 2 | Store | 902 | 6467.49 | 5833678 |

2 rows | 1.59s runtime Refreshed 6 hours ago

## Question 2.5:

05:37 PM (12s) 1 SQL

```sql
SELECT p.Category,
ROUND(AVG(cf.Rating), 2) AS AverageRatings,
COUNT(cf.FeedbackID) AS NumberOfReviews
FROM Customer_Feedback cf
JOIN Sales s
ON cf.OrderID = s.OrderID
JOIN Products p
ON s.ProductID = p.ProductID
GROUP BY p.Category
HAVING COUNT(cf.FeedbackID) >= 50
ORDER BY AverageRatings DESC;
```

See performance (1) Optimize

Table

| | Category | AverageRatings | NumberOfReviews |
|---|---|---|---|
| 1 | Electronics | 3.81 | 344 |
| 2 | Lifestyle Goods | 3.75 | 347 |
| 3 | Home Appliances | 3.73 | 309 |

Witle Academy

## Question 3.1

05:53 PM (3s) 1 SQL

```sql
WITH ProductSales AS (
    SELECT
    p.Category,
    p.ProductName,
    SUM(s.UnitPrice) AS TotalRevenue
    FROM Products p
    JOIN Sales s ON p.ProductID = s.ProductID
    GROUP BY p.Category, p.ProductName
),
RankedProducts AS (
    SELECT
    category,
    ProductName,
    TotalRevenue,
    ROW_NUMBER() OVER (PARTITION BY Category
    ORDER BY TotalRevenue DESC
    ) AS rn
    FROM ProductSales
)
SELECT
Category,
ProductName,
TotalRevenue
FROM RankedProducts
WHERE rn = 1
ORDER BY Category;
```

See performance (1) Optimize

Table

| | Category | ProductName | TotalRevenue |
|---|---|---|---|
| 1 | Electronics | Smartphone Pro | 1728909 |
| 2 | Home Appliances | Air Purifier | 538902 |
| 3 | Lifestyle Goods | Fitness Tracker | 169915 |

Witle Academy

## Question 3.2:

06:08 PM (2s) 1 SQL

```sql
SELECT c.CustomerID,
c.FirstName AS CustomerName,
c.Region,c.Channel AS PrimaryChannel,
SUM(UnitPrice) AS TotalPurchases,
COUNT(s.OrderID) AS NumberOfOrders,
ROUND(AVG(s.UnitPrice), 2) AS AverageOrderValue
FROM Customers c
JOIN Sales s
ON c.CustomerID = s.CustomerID
GROUP BY c.CustomerID,
c.FirstName,
c.LastName,
c.Region,
c.Channel
HAVING COUNT(s.OrderID) > 3
ORDER BY TotalPurchases DESC
```

See performance (1) Optimize

Table

| | CustomerID | CustomerName | Region | PrimaryChannel | TotalPurchases | NumberOfOrd |
|---|---|---|---|---|---|---|
| 1 | C0267 | Jessica | East | Store | 68490 | |
| 2 | C0026 | Charlotte | East | Online | 64994 | |
| 3 | C0068 | Michael | West | Online | 60694 | |
| 4 | C0419 | Charlotte | East | Store | 60692 | |

## Question 3.3: Profit

06:37 PM (3s) 1 SQL

```sql
SELECT
    p.ProductName,
    p.Category,
    SUM(s.UnitPrice) AS TotalSales,
    SUM(s.Profit) AS TotalProfit,
    ROUND((SUM(s.Profit) / SUM(s.UnitPrice)) * 100, 2) AS ProfitMargin
FROM Products p
JOIN Sales s
ON p.ProductID = s.ProductID
GROUP BY p.ProductName, p.Category
ORDER BY ProfitMargin DESC;
```

See performance (1) Optimize

Table

| | ProductName | Category | TotalSales | TotalProfit | ProfitMargin |
|---|---|---|---|---|---|
| 1 | E-Reader | Electronics | 318409 | 219097.7500000001 | 68.81 |
| 2 | Coffee Maker | Home Appliances | 100023 | 68818.95000000001 | 68.8 |
| 3 | Wireless Headphones | Electronics | 207417 | 138720.45000000004 | 66.88 |
| 4 | Food Processor | Home Appliances | 248429 | 162445.75 | 65.39 |
| 5 | Throw Pillow Set | Lifestyle Goods | 59126 | 38621.549999999996 | 65.32 |
| 6 | Toaster | Home Appliances | 49118 | 30935.2 | 62.98 |
| 7 | Smart TV 55" | Electronics | 1091916 | 686902.3500000001 | 62.91 |

## Question 3.4:

```sql
WITH YearlySales AS (
SELECT YEAR(OrderDate) AS SalesYear,
SUM(UnitPrice) AS TotalSales
FROM Sales
WHERE YEAR(OrderDate) IN (2023, 2024)
GROUP BY YEAR(OrderDate)
)
SELECT
y2023.TotalSales AS Year2023,
y2024.TotalSales AS Year2024,
((y2024.TotalSales - y2023.TotalSales) / y2023.TotalSales) * 100 AS GrowthPercentage
FROM
(SELECT TotalSales FROM YearlySales WHERE SalesYear = 2023) y2023,
(SELECT TotalSales FROM YearlySales WHERE SalesYear = 2024) y2024
```

See performance (1) Optimize

Table

| | Year2023 | Year2024 | GrowthPercentage |
|---|---|---|---|
| 1 | 4691671 | 5290029 | 12.753622323474941 |

## Question 3.5:

```sql
WITH RegionSales AS (
    SELECT c.Region,
    SUM(s.UnitPrice) AS TotalSales,
    COUNT(s.OrderID) AS TotalOrders
    FROM Customers c
    JOIN Sales s
    ON c.CustomerID = s.CustomerID
    GROUP BY c.Region
)
SELECT Region, TotalSales,TotalOrders,
ROW_NUMBER() OVER (ORDER BY TotalSales DESC) AS Rank
FROM RegionSales
ORDER BY Rank
```

See performance (1) Optimize

Table +

| | Region | TotalSales | TotalOrders | Rank |
|---|---|---|---|---|
| 1 | North | 2919769 | 731 | 1 |
| 2 | East | 2488500 | 600 | 2 |
| 3 | South | 2355855 | 595 | 3 |
| 4 | West | 2217576 | 574 | 4 |

## Question 4.1:

```sql
SELECT
  CASE
    WHEN rating BETWEEN 4 AND 5 THEN 'Highly Satisfied'
    WHEN rating BETWEEN 1 AND 3 THEN 'Less Satisfied'
    ELSE 'neutral'
  END AS satisfaction_level,
  AVG(order_count) AS avg_orders_per_customer,
  COUNT(DISTINCT customerID) AS total_customers
FROM (
  SELECT
    s.CustomerID,
    MAX(cf.rating) AS rating,
    COUNT(s.OrderID) AS order_count
  FROM workspace.default.sales s
  INNER JOIN workspace.default.customer_feedback cf
    ON s.CustomerID = cf.CustomerID
  GROUP BY s.CustomerID
  HAVING MAX(cf.rating) BETWEEN 1 AND 5
)
GROUP BY satisfaction_level
```

See performance (1) Optimize

Table +

| | satisfaction_level | avg_orders_per_customer | total_customers |
|---|---|---|---|
| 1 | Highly Satisfied | 14.739690721649485 | 388 |
| 2 | Less Satisfied | 6.224489795918367 | 49 |

### *Business Insight:*

*High customer ratings gives good results as the customers with higher ratings tend to average high on repeated purchase than those who do not. Therefore thriving for positive ratings will eventually produce great results for the business.*

## Question 4.2:

08:30 PM (10s) 1 SQL

```sql
SELECT
  CASE
    WHEN DiscountPercent = 0 THEN '0%'
    WHEN DiscountPercent BETWEEN 1 AND 10 THEN '1-10%'
    WHEN DiscountPercent BETWEEN 11 AND 20 THEN '11-20%'
    WHEN DiscountPercent BETWEEN 21 AND 30 THEN '21-30%'
    ELSE '31%+'
  END AS discount_band,
  COUNT(*) AS order_count,
  ROUND(SUM(TotalSales), 2) AS total_sales,
  ROUND(SUM(Profit), 2) AS total_profit,
  ROUND(SUM(Profit) / SUM(TotalSales) * 100, 2) AS profit_margin_pct
FROM sales
GROUP BY discount_band
ORDER BY
  CASE discount_band
    WHEN '0%' THEN 1
    WHEN '1-10%' THEN 2
    WHEN '11-20%' THEN 3
    WHEN '21-30%' THEN 4
    ELSE 5
  END
```

See performance (1) Optimize

Table +

| | discount_band | order_count | total_sales | total_profit | profit_margin_pct |
|---|---|---|---|---|---|
| 1 | 0% | 1000 | 7013904 | 2804454 | 39.98 |
| 2 | 1-10% | 887 | 6196766.8 | 2190926.8 | 35.36 |
| 3 | 11-20% | 433 | 2678319.95 | 735459.95 | 27.46 |
| 4 | 21-30% | 180 | 989326.65 | 184246.65 | 18.62 |

### *Business Insight:*

*The data shows that as discounts increase, both sales and profit decline sharply, indicating that higher discounts erode profitability without proportionally boosting order volume. The 0% discount band delivers the highest total profit and sales, suggesting strong customer willingness to pay full price. Strategically, maintaining minimal discounts or focusing on value-based selling could maximize margins while sustaining healthy sales volumes.*

## Question 4.3:

08:39 PM (2s) 1 SQL

```sql
-- Identify bottom 5 products by total revenue and analyze discontinuation factors
SELECT
  p.ProductID,
  p.ProductName,
  ROUND(SUM(s.TotalSales), 2) AS total_revenue,
  SUM(s.Quantity) AS sales_volume
FROM
  products p
JOIN
  sales s ON p.ProductID = s.ProductID
GROUP BY
  p.ProductID, p.ProductName
ORDER BY
  total_revenue ASC
LIMIT 5
```

See performance (1) Optimize

Table +

| | ProductID | ProductName | total_revenue | sales_volume |
|---|---|---|---|---|
| 1 | P023 | Water Bottle | 33422.05 | 180 |
| 2 | P030 | Scented Candles | 41600.8 | 131 |
| 3 | P021 | Yoga Mat | 48991.15 | 176 |
| 4 | P017 | Electric Kettle | 50423.95 | 107 |
| 5 | P025 | Sunglasses | 64618.05 | 175 |

***Business Recommendation:***

The data highlights that Sunglasses generate the highest revenue despite a similar sales volume to the Yoga Mat and Water Bottle, suggesting stronger pricing power or higher margins. Electric Kettles, while having the lowest sales volume, still deliver substantial revenue, indicating premium positioning. Scented Candles show moderate revenue with relatively low volume, pointing to niche demand but potentially higher unit value. Overall, focusing on Sunglasses and Electric Kettles could maximize profitability, while scaling Yoga Mats and Water Bottles may drive volume-based growth.

Witle Academy

# Part 5: Executive Management Report

## Section 1: Overall Business Performance

Provide a summary of key business metrics:

- Total revenue and profit for 2023-2024
- Overall profit margin
- Total number of orders and customers
- Average order value

***Your SQL Query:***

```sql
SELECT
    -- Revenue & Profit (2023-2024)
    SUM(CASE WHEN YEAR(OrderDate) IN (2023, 2024) THEN UnitPrice END) AS TotalRevenue_2023_2024,
    SUM(CASE WHEN YEAR(OrderDate) IN (2023, 2024) THEN Profit END) AS TotalProfit_2023_2024,

    -- Overall Profit Margin
    (SUM(Profit) * 100.0) / NULLIF(SUM(UnitPrice), 0) AS OverallProfitMarginPercent,

    -- Total Orders
    COUNT(DISTINCT OrderID) AS TotalOrders,

    -- Total Customers
    COUNT(DISTINCT CustomerID) AS TotalCustomers,

    -- Average Order Value
    AVG(UnitPrice) AS AverageOrderValue

FROM Sales
WHERE YEAR(OrderDate) IN (2023, 2024);
```

See performance (1) Optimize

Table +

| | TotalRevenue_2023_2024 | TotalProfit_2023_2024 | OverallProfitMarginPercent | TotalOrders | TotalCustome |
|---|---|---|---|---|---|
| 1 | 9981700 | 5915087.39999998 | 59.2593185529517 | 2500 | |

## Section 2:

## Insight 1:

```sql
WITH YearlySales AS (
SELECT YEAR(OrderDate) AS SalesYear,
SUM(UnitPrice) AS TotalSales
FROM Sales
WHERE YEAR(OrderDate) IN (2023, 2024)
GROUP BY YEAR(OrderDate)
)
SELECT
y2023.TotalSales AS Year2023,
y2024.TotalSales AS Year2024,
((y2024.TotalSales - y2023.TotalSales) / y2023.TotalSales) * 100 AS GrowthPercentage
FROM
(SELECT TotalSales FROM YearlySales WHERE SalesYear = 2023) y2023,
(SELECT TotalSales FROM YearlySales WHERE SalesYear = 2024) y2024
```

See performance (1) Optimize

Table +

| | Year2023 | Year2024 | GrowthPercentage |
|---|---|---|---|
| 1 | 4691671 | 5290029 | 12.753622323474941 |

*With a profit margin of over 12% growth, the business is operating at a highly efficient level, converting a significant portion of revenue into profit. This indicates strong cost control and pricing power.*

**Insight 2:**

```sql
SELECT
  CASE
    WHEN rating BETWEEN 4 AND 5 THEN 'Highly Satisfied'
    WHEN rating BETWEEN 1 AND 3 THEN 'Less Satisfied'
    ELSE 'neutral'
  END AS satisfaction_level,
  AVG(order_count) AS avg_orders_per_customer,
  COUNT(DISTINCT customerID) AS total_customers
FROM (
  SELECT
    s.CustomerID,
    MAX(cf.rating) AS rating,
    COUNT(s.OrderID) AS order_count
  FROM workspace.default.sales s
  INNER JOIN workspace.default.customer_feedback cf
    ON s.CustomerID = cf.CustomerID
  GROUP BY s.CustomerID
  HAVING MAX(cf.rating) BETWEEN 1 AND 5
)
GROUP BY satisfaction_level
```

See performance (1) Optimize

Table +

| | satisfaction_level | avg_orders_per_customer | total_customers |
|---|---|---|---|
| 1 | Highly Satisfied | 14.739690721649485 | 388 |
| 2 | Less Satisfied | 6.224489795918367 | 49 |

*High Customer Satisfaction: Happy customer means more repeated orders and more profit returns for the business.*

**Insight 3:**

08:30 PM (10s) 1 SQL

```sql
SELECT
  CASE
    WHEN DiscountPercent = 0 THEN '0%'
    WHEN DiscountPercent BETWEEN 1 AND 10 THEN '1-10%'
    WHEN DiscountPercent BETWEEN 11 AND 20 THEN '11-20%'
    WHEN DiscountPercent BETWEEN 21 AND 30 THEN '21-30%'
    ELSE '31%+'
  END AS discount_band,
  COUNT(*) AS order_count,
  ROUND(SUM(TotalSales), 2) AS total_sales,
  ROUND(SUM(Profit), 2) AS total_profit,
  ROUND(SUM(Profit) / SUM(TotalSales) * 100, 2) AS profit_margin_pct
FROM sales
GROUP BY discount_band
ORDER BY
  CASE discount_band
    WHEN '0%' THEN 1
    WHEN '1-10%' THEN 2
    WHEN '11-20%' THEN 3
    WHEN '21-30%' THEN 4
    ELSE 5
  END
```

See performance (1) Optimize

Table +

| | discount_band | order_count | total_sales | total_profit | profit_margin_pct |
|---|---|---|---|---|---|
| 1 | 0% | 1000 | 7013904 | 2804454 | 39.98 |
| 2 | 1-10% | 887 | 6196766.8 | 2190926.8 | 35.36 |
| 3 | 11-20% | 433 | 2678319.95 | 735459.95 | 27.46 |
| 4 | 21-30% | 180 | 989326.65 | 184246.65 | 18.62 |

*Discounts are good for the business to attract customers but strong measures to be taken as this creates less revenue for the business.*

## Section 3: Strategic Recommendations

1. **Leverage Premium Positioning:** With an average order value near 4,000 and a 59% profit margin, management should continue emphasizing premium offerings and bundled packages. This strategy reinforces high-value transactions and sustains profitability.

2. **Enhance Customer Retention Programs:** The ratio of 497 customers generating 2,500 orders shows strong repeat purchasing. Management should invest in loyalty programs, personalized upselling, and subscription-style models to deepen engagement and maximize lifetime value.

3. **Expand Customer Acquisition Efforts:** While profitability is strong, the customer base is relatively small compared to revenue. Management should allocate resources to targeted marketing campaigns and partnerships to broaden reach and reduce reliance on repeat buyers.

4. **Optimize Pricing Strategy:** The high margin indicates room to experiment with tiered pricing or value-added services. Management could test premium tiers or exclusive bundles to capture even more value per transaction.

5. **Scale Efficiently:** With strong cost control already evident, management should prioritize scaling operations—whether through geographic expansion, digital channels, or product line diversification—while maintaining the current margin discipline.
